<u>Amendments to the Abstract</u>

Please amend the Abstract of the Disclosure as follows:

A printing apparatus ~~which~~ <u>can</u> quickly ~~cancels~~ <u>cancel</u> a print job without any influence on the ~~subsequent~~ other <u>subsequent</u> print jobs when a print cancel instruction is issued. During printing, if a print cancel instruction is inputted from a printer operation unit, ~~107,~~ a printer function manager ~~109~~ notifies a print command interpreter ~~108~~ of the cancellation. The print command interpreter ~~108~~ searches data processed at that time in a transmission/reception buffer for an end mark command indicating the end of the cancelled job. Then the print command interpreter ~~108~~ deletes the data before the end mark command.
